# **DIAGNOSTIC LAB REPORTING SYSTEM**

## **Mini Project - I**

Submitted in fulfilment of the requirements  
For the degree of

**Bachelor of Technology in Computer Engineering**

By

**Shail Patel - 17BCE114**

**Jeet Sureja - 17BCE123**

Guided By

**Prof. Jitali Patel**

**DEPARTMENT OF COMPUTER ENGINEERING**

**DEPARTMENT OF COMPUTER ENGINEERING**

**Ahmedabad 382481**

## **CERTIFICATE**

This is to certify that the project/Seminar entitled “DIAGNOSTIC LAB REPORTING SYSTEM” submitted by SHAIL PATEL (17BCE114) and JEET SUREJA (17BCE123), towards the partial fulfillment of the requirements for the degree of Bachelor of Technology in Computer Engineering of Nirma University is the record of work carried out by him/her under my supervision and guidance. In my opinion, the submitted work has reached a level required for being accepted for examination.

Prof. Jitali Patel  
Assistant Professor  
Department of Computer Science ,  
Institute of Technology ,  
Nirma University ,  
Ahmedabad

Dr. Madhuri D Bhavsar  
Professor and Head of Department  
Department of Computer Science,  
Institute of Technology,  
Nirma University,  
Ahmedabad

## **ACKNOWLEDGEMENT**

I would like to express my deepest appreciation to all those who provided me the possibility to complete this report. I acknowledge with thanks, the support rendered by Prof. Jitali Patel , under whose aegis I was able to complete the task in a given period of time. I also appreciate the constructive suggestions given by our friends to further enhance content of the report.

## **ABSTRACT**

This program aims to facilitate the process of making appointment and reviewing the reports online.

We aim to have following use cases in the program:

- **Make appointment** - Make an appointment for a particular date and time
- **Cancel/Reschedule appointment** - Appointment can be canceled or rescheduled to any other date and time
- **Add/Update reports** - Reports can be added or updated by the employees
- **Check reports** - View previous reports

# **1 INTRODUCTION**

## **1.1 Purpose**

This document reports the functional and non-functional requirements of our project 'DIAGNOSTICS LAB REPORTING SYSTEM'. It gives a description of the software's scope as well as its requirements and constraints.

## **1.2 Product Scope**

This software is to be used as tool to make appointment and view reports of any person. The employee can view reports, add/update/delete results of customers. It benefits customer by reducing time taken to go to the lab and make appointment.

# **2 OVERALL DESCRIPTION**

## 2.1 Product Perspective

This product is built with the perspective of any working class people. The product should ease the appointment process and encourage the customer to use such functionality.

## 2.2 Product Functions

The product will provide the following functions:

1. **Make appointment** - Make an appointment for a particular date and time.
2. **Add/Update reports** - Reports can be added or updated by the employees.
3. **Check reports** - View previous reports.
4. **Cancel/Reschedule appointment** - Appointment can be canceled or rescheduled to any other date and time.

## 2.3 User Classes and Characteristics

- **Customer** - This user class use the product whenever he/she wants to make any lab test. They will be able to access only their results and details of the tests.
- **Employee** - This user class comprise of all the employees of the laboratory. They will use the product to upload test results or update/delete the test results which they have conducted throughout the day. They can access reports of any customer.
- **Admin** - This user class may be comprise of incharge of managing the laboratory. They will be able to add new employee or remove the employee. They can access all the details about the customer and test reports.

### 3          FUNCTIONAL          REQUIREMENTS          AND INTERFACES

## **3.1 Functional Requirements**

It outlines the tasks that the product will be able to perform.

### **3.1.1 Initial Set Up**

The admin have to set up the database for the customers and reports. The admin will also set the employees. The customer have to sign up if he/she is using the product first time or he/she have to login to the system.

### **3.1.2 Landing Window**

After login, the main window consist of option with new appointment will appear from where the customer can book a test slot for particular date and time. At the time of booking a test slot necessary information will be taken from the customer like name, email, contact number etc. After the successful booking an acknowledgement will be sent to the customer via email.

### **3.1.3 Add Test Results**

An employee will click on add reports and he/she will be able to add test results for any tests. The employee also can update or delete the test report if there is any need of it.

### **3.1.4 Check Reports**

The customer can select check report option to view the previous reports if any. They can only see their reports.

### **3.1.5 Cancel/Reschedule Slot**

The customer can also cancel or reschedule the booking slot in case of any emergency.

## **3.2 Software Requirements**

- **Java EE** : It is collection of JAVA APIs that can be used to write server-side application.
- **Local MySQL Server** : The database will interact with the product by responding to queries from the product using SQL.

## **3.3 Communication Interface**

The product will initially work locally, the database will be stored on the client machine which further can be stored on a remote server and accessed using HTTP protocols.

# **4 NON FUNCTIONAL REQUIREMENTS**

## **4.1 Performance Requirement**

Startup of the software must be fast and data retrieval should not take much time.

## **4.2 Security Requirement**

Care needs to be taken to prevent unauthorized changes in test reports by malicious entities. This may be done by using an additional layer of user authentication using Id and Password.

## **4.3 Software Quality Attributes**

The product should be easy to use design. Which means the user must understand every aspect of the product by just looking at the User Interface.

# **5 PRELIMINARY DESIGN**

The preliminary design phase of the project involved creating the following UML diagram using open source UML modeling software LUCIDCHART.

## 5.1 USE-CASE DIAGRAM

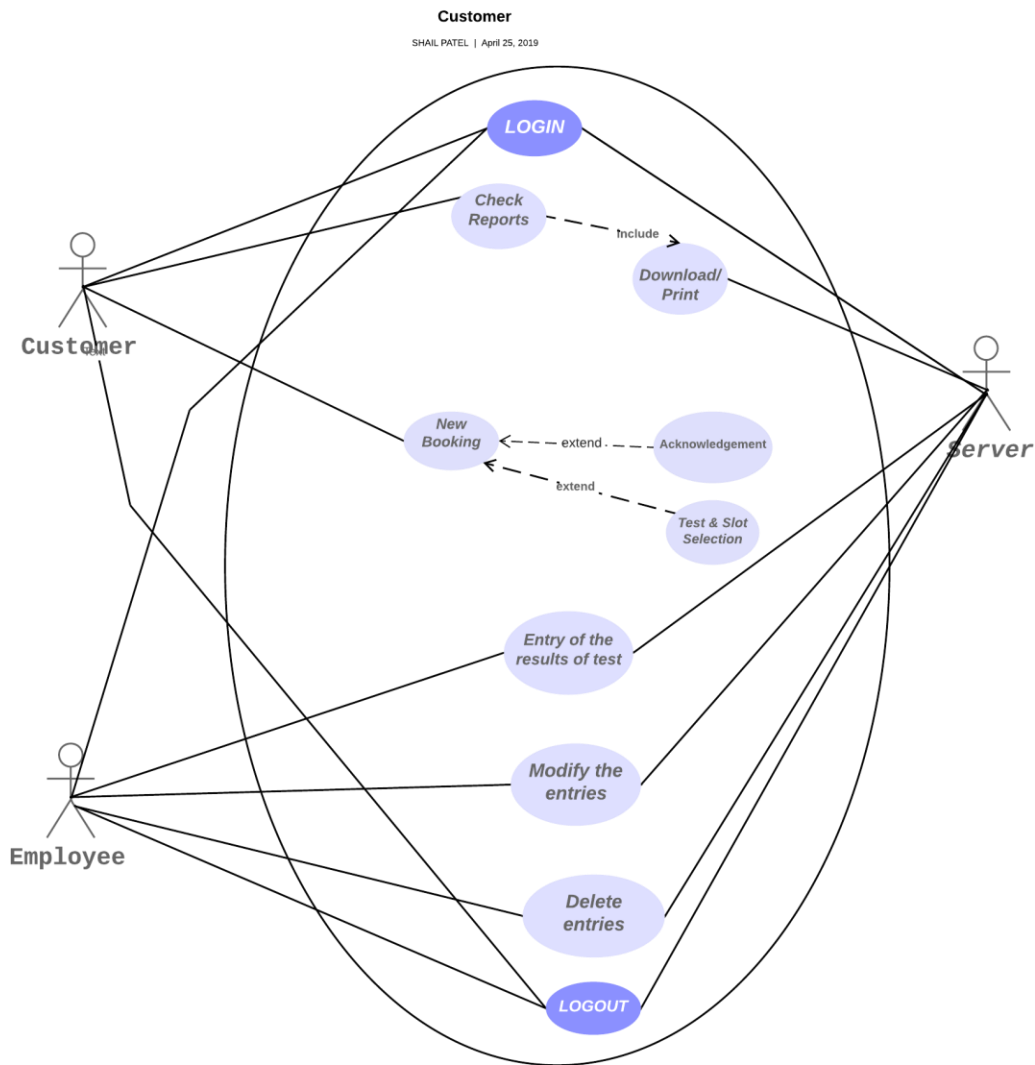

Figure 5.1 Use-case Diagram of Project

## 6 IMPLEMENTATION

### 6.1 Database Creation

MySQL has been used for data creation. However, the admin can choose any other database management system of his/her choice. The database includes the following tables:

- 1. Customerinfo:** This table contains credentials of the users i.e., Name, username, password, password, CustomerID and Category of users (Customer, Employee, Administrator).
- 2. BMtable:** This table stores the records of test “Basic Metabolic Panel”.
- 3. LPtable:** This table stores the records of test “Lipid Panel”.
- 4. CBCtable:** This table stores the records of test “CBC Panel”.

This structure is flexible and if we want to increase the number of tests provided to the customers, then additional tables for the respective tests are required to be added.

## 6.2 Database Connectivity Using JDBC

In order to connect the database to the application, Java provides Java Database Connection Drivers. The package `java.sql` has been imported in order to access 9 the classes present in it for connecting the database. The

class used for connection has been named as **MyConnectionProvider**. The credentials required to connect to the database are stored in **MyProvider** class. The **MyConnectionProvider** class has a method **getCon()** which connects using **DriverManager** methods.

Each Customer retrieved from the database will have an independent object of the Customer class.

For executing queries, **PreparedStatement** and **ResultSet** objects are used.

## **6.3 User Interfaces**

For constructing interfaces, jsp pages are made. Combination of HTML, CSS, JavaScript are used in jsp pages.

For handling requests, all the requests are directed to respective Servlets.

# **7 FLOW OF THE PROJECT**

## **7.1 HomePage**

The homepage has options to Register, Login along with About Us and Contact Us pages.

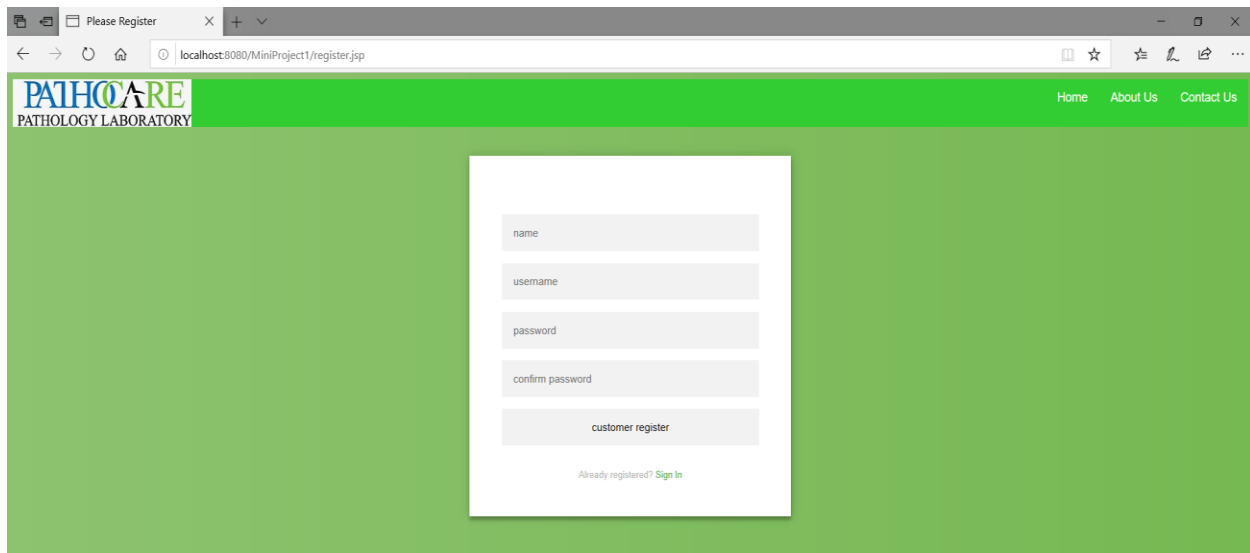

Figure 7.1 Home Page

## 7.2 Registration Page

The registration page asks for the Name, Username, Password and confirmation field for password.

Password has to be at least 6 characters long and should match with the entered confirmation password.

All the fields are mandatory and violation of any of these conditions will generate an alert from the browser.

The screenshot shows a web browser window with the title 'Please Register'. The address bar displays 'localhost:8080/MiniProject1/register.jsp'. The page features a green header with the 'PATHOCARE PATHOLOGY LABORATORY' logo on the left and navigation links 'Home', 'About Us', and 'Contact Us' on the right. The main content area has a green background. In the center, there is a white registration form with the following fields: 'name', 'username', 'password', and 'confirm password'. Below these fields is a 'customer register' button. At the bottom of the form, there is a link that says 'Already registered? Sign In'.

Figure 7.2 Registration Page

## 7.3 Login Page

If the customer is an existing one, he/she can directly go to the login page and enter the respective credentials.

If the credentials are matched, the system redirects the user to Dashboard. Upon failing to match the credentials, “Data not Found, Please Register” message will be displayed to the customer.

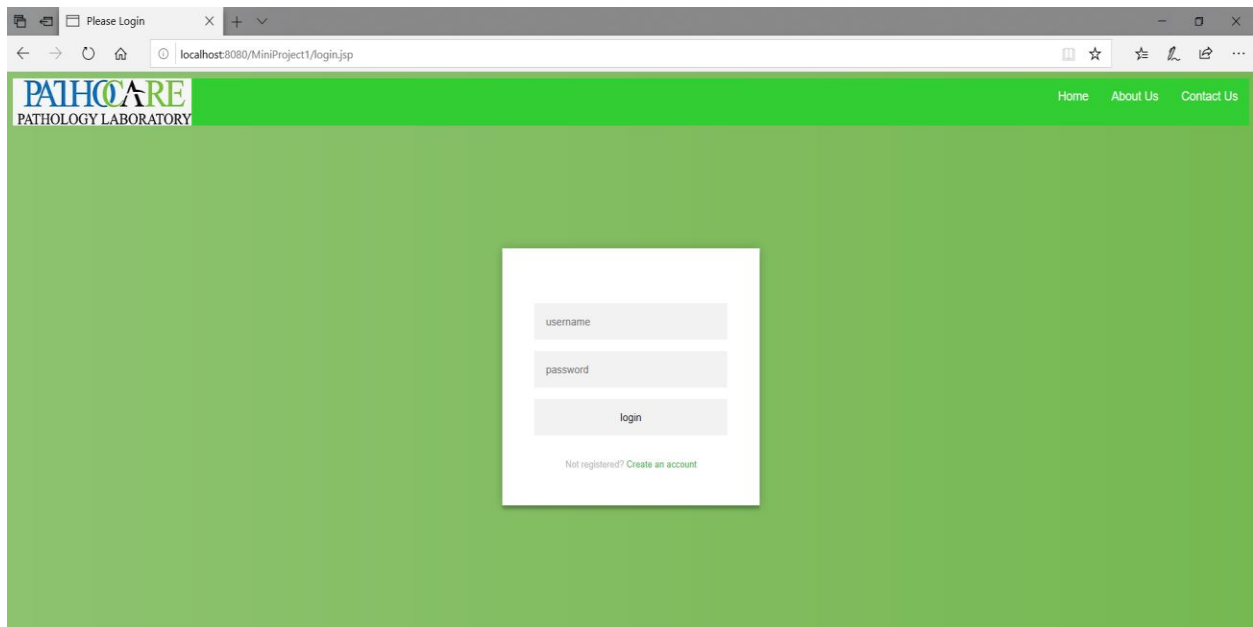

Figure 7.3 Login Page

## 7.4 Contact Us

A general contact us page is available to the user without having to login.

Figure 7.4 About Us

## 7.5 Customer Dashboard

If the logged in user is an Customer, he/she will have 'C' as the category in our database and will be redirected to the Customer Dashboard.

In the Customer Dashboard, user has options to generate a **new booking**, **check reports** for previous reports, **Logout** button to go back to the homepage.

Customer is greeted with a welcome message on the dashboard.

Figure 7.5 Customer Dashboard

## 7.6 New Appointment Page

Upon clicking **Appointment** button in the menu bar, the customer is redirected to a new appointment booking page where he/she can select and appropriate date and time slot.

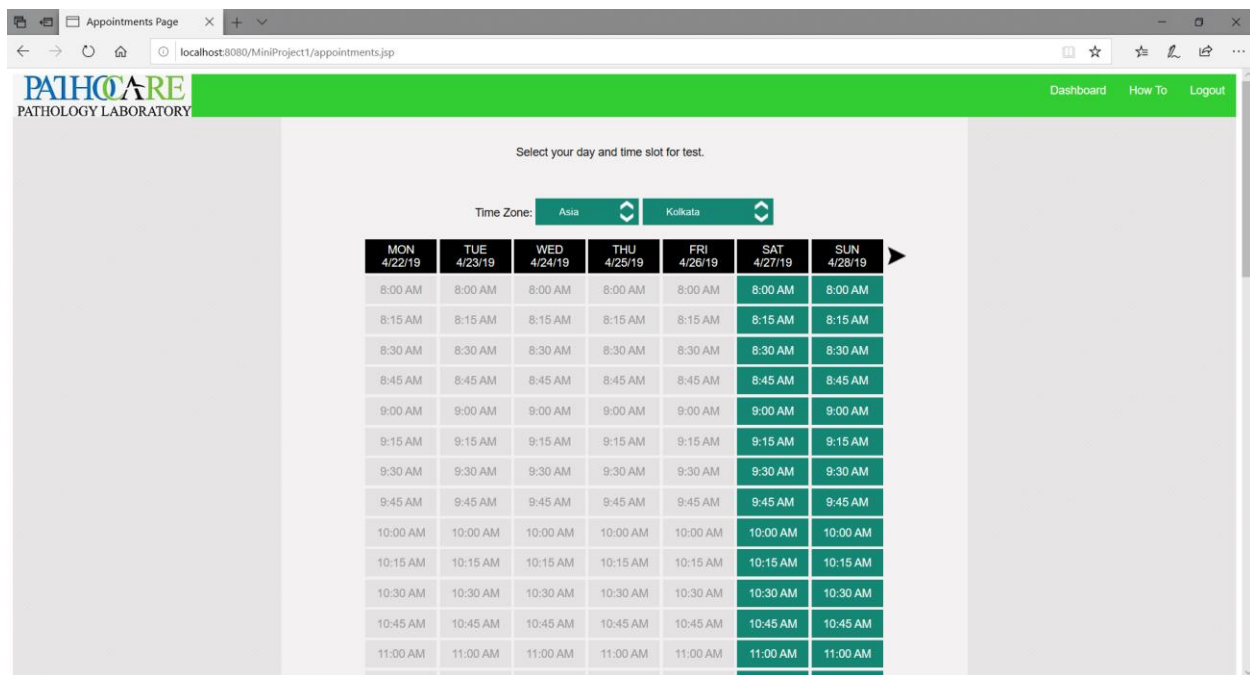

Figure 7.6 NewAppointment Page

Upon clicking on an available slot, the user is redirected to another page where he/she is required to enter minimal necessary details to book the slot.

The screenshot shows a web browser window with the title 'Appointments Page'. The address bar shows 'localhost:8080/MiniProject1/appointments.jsp'. The page header includes the logo 'PAIHOCARE PATHOLOGY LABORATORY' and navigation links 'Dashboard', 'How To', and 'Logout'. The main content area displays a booking form for Saturday, April 27, 2019, 9:00 AM. The form includes fields for First Name, Last Name, Email, and Phone Number. It also has a section for 'PLEASE CHOOSE TESTS' with checkboxes for Complete Blood Count, Prothrombin Time, Basic Metabolic Panel, Comprehensive Metabolic Panel, Lipid Panel, and Urinalysis. A CAPTCHA is present at the bottom.

BOOKING: Saturday, April 27, 2019 9:00 AM

\*FIRST NAME:

LAST NAME:

\*EMAIL:

\*PHONE NUMBER:  e.g. 081234 56789

\*PLEASE CHOOSE TESTS:

- ☐ Complete Blood Count
- ☐ Prothrombin Time
- ☐ Basic Metabolic Panel
- ☐ Comprehensive Metabolic Panel
- ☐ Lipid Panel
- ☐ Urinalysis

☐ I'm not a robot

Confirm Booking Cancel

Figure 7.7 Information Page

Once the user confirms his/her booking, the booking is automatically added to his/her Google Calendar and an acknowledgement mail to send to the given email address.

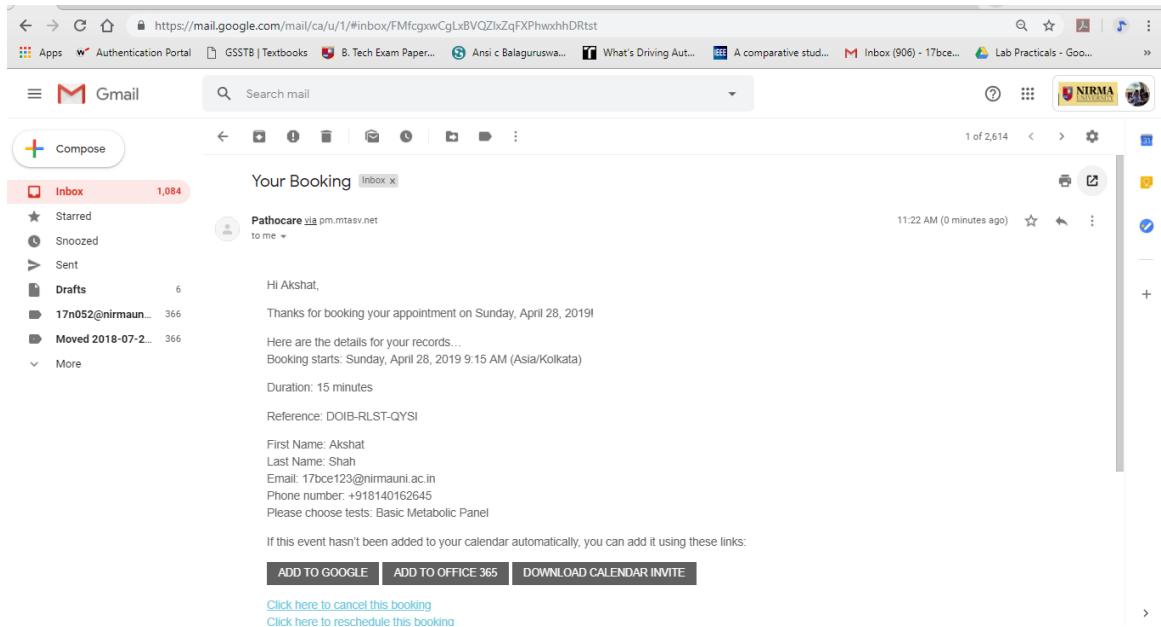

Figure 7.8 Acknowledgement

If the user wants to reschedule or cancel the booking, there are options provided in the acknowledgement mail itself.

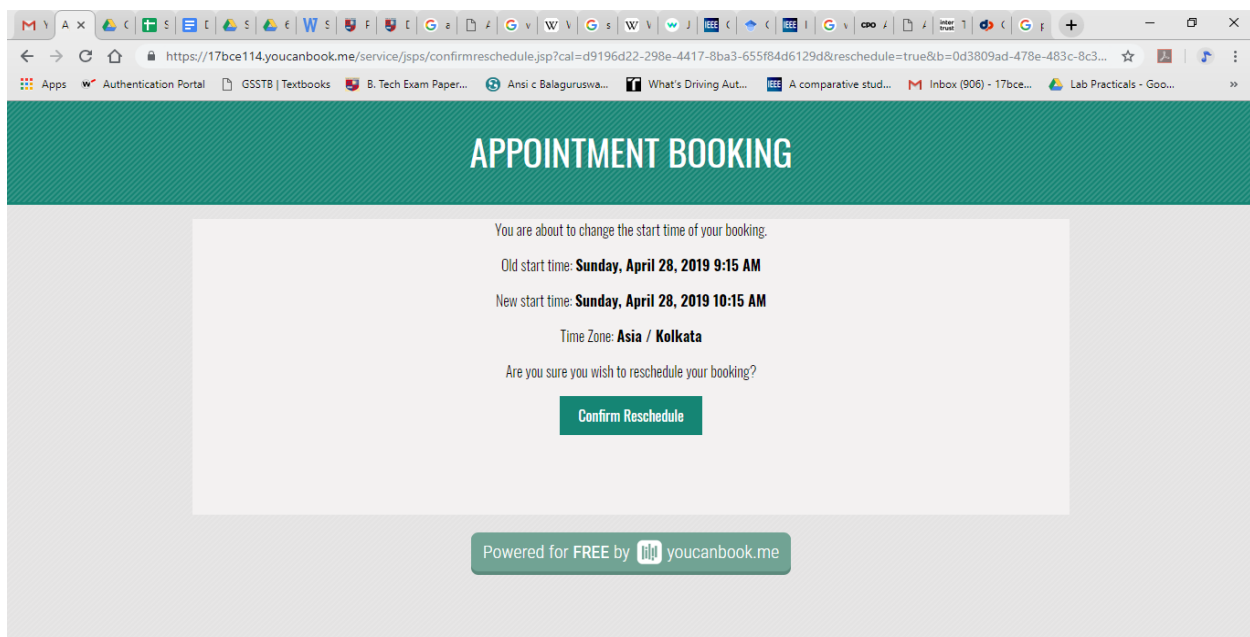

Figure 7.9 Reschedule Page

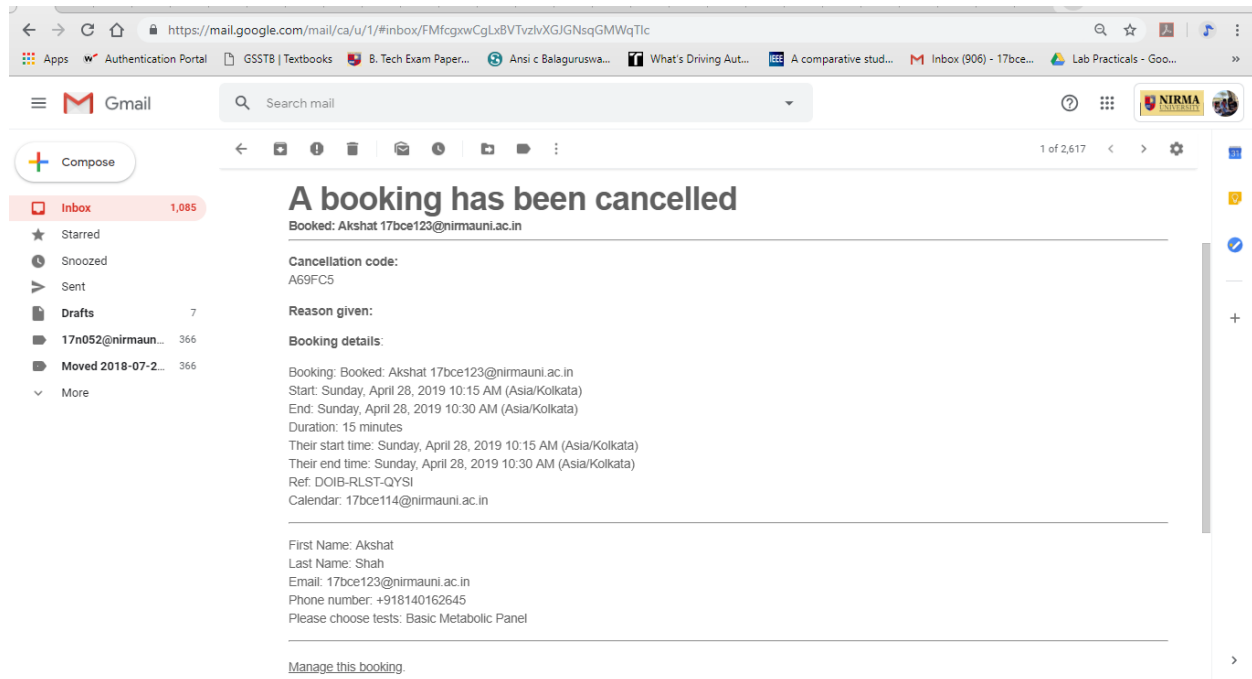

Figure 7.10 Cancellation Acknowledgement

## 7.7 Employee Dashboard

Whenever an employee login, the system automatically detects his category using the above mentioned mechanism and redirects him/her to Employee Dashboard.

The Employee Dashboard has options to **Add Report**, **Delete Report** and **Logout**.

Figure 7.11 Employee Dashboard

Upon clicking on Add report, employee has to select between tests. After selecting a test, he/she is redirected to a form for that respective test. Employee has to enter the report data into that form which is then stored onto the database and will be used for further retrieval.

**BASIC METABOLIC PANEL REPORT**

Customer Id:

Name:

Gender:

Date:

Glucose Serum:

BUN:

Creatinin Serum:

BUN/Creatinin ratio:

Chloride Serum:

Calcium Serum:

Figure 7.12 Basic Metabolic Panel Report

The screenshot shows a web browser window with the URL `localhost:8080/MiniProject1/formLP.jsp`. The page header features the **PATHOCARE** logo and the text **PATHOLOGY LABORATORY** on the left, and **Dashboard** and **Logout** links on the right. The main heading is **LIPID PANEL REPORT**. Below this, there is a form with the following fields: **Customer Id:** (text input), **Name:** (text input), **Gender:** (dropdown menu with 'M' selected), **Date:** (text input with placeholder 'mm/dd/yyyy'), **Cholesterol, Total:** (text input), **HDL Cholesterol:** (text input), **LDL Cholesterol:** (text input), and **Triglycerides:** (text input). At the bottom of the form is a **Submit-LP** button.

Figure 7.13 Lipid Panel Report

The screenshot shows a web browser window with the URL `localhost:8080/MiniProject1/formCBC.jsp`. The page header features the **PATHOCARE** logo and the text **PATHOLOGY LABORATORY** on the left, and **Dashboard** and **Logout** links on the right. The main heading is **CBC REPORT**. Below this, there is a form with the following fields: **Customer Id:** (text input), **Name:** (text input), **Gender:** (dropdown menu with 'M' selected), **Date:** (text input with placeholder 'mm/dd/yyyy'), **Hb-Haemoglobin:** (text input), **RCB count:** (text input), **WBC-Total count:** (text input), **Platelet count:** (text input), **HCT:** (text input), **MCV:** (text input), **MCH:** (text input), and **MCHC:** (text input). At the bottom of the form is a **Submit-CBC** button.

Figure 7.14 CBC Report

## 7.8 Admin Dashboard

Admin Dashboard is just like Employee Dashboard with the exception that Admin has the functionality to add Employees.

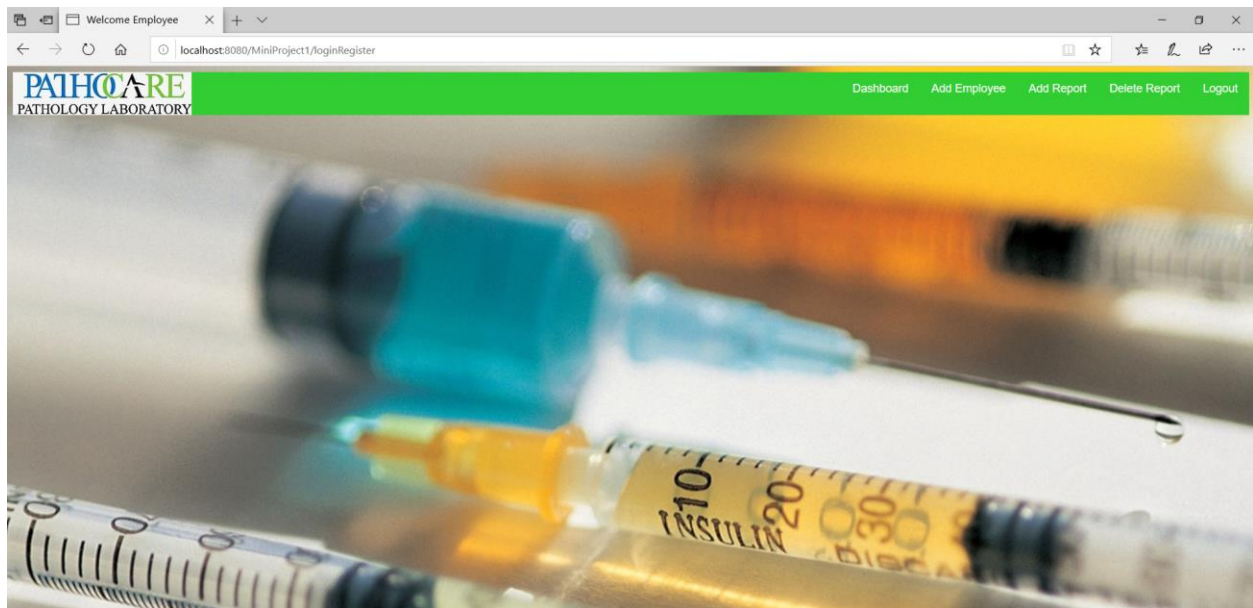

Figure 7.15 Admin Dashboard

## 7.9 Add Employee page

Add Employee page is just like a regular registration form but upon submission the entry will have category 'E' (Employee) in the database.

Figure 7.16 Add Employee Page

## 8 Conclusion & Summary

### 8.1 Summary

This report discussed our project's functional requirements, the design process and its successful implementation. We briefly laid out the functioning of the program and how it connects to the external database.

## 8.2 Conclusion

After successful completion of the project we learned to:

- Acquire practical knowledge of Java EE, JDBC and MySQL Server for project
- development.
- Identify, analyze, formulate and handle programming projects with a
- comprehensive and systematic approach.
- Contribute as an individual or in a team in development of technical projects
- Develop effective communication skills for presentation of project related
- Activities.
